Series 957

Reduced Pressure Zone Assembly

21/2" - 10"

Series 957 Reduced Pressure Zone assembly provides protection to the potable water system from contamination in accordance with national plumbing codes. The assemblies are normally used in health hazard applications for protection against backsiphonage or backpressure.

The series includes a flood sensor to detect excessive water discharges from the relief valve. The sensor is installed on the assembly exterior and does not alter assembly functions or certifications. The sensor relays a signal that triggers notification to facility personnel for corrective action, thus limiting flooding and costly damage.

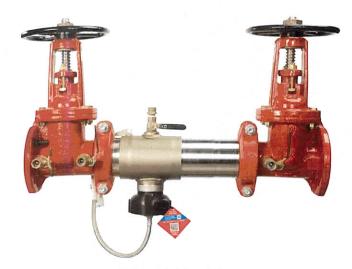

NOTICE

An add-on connection kit is required to activate the flood sensor. Without the connection kit, the sensor is a passive component that has no communication with any other device. (For more information download RP/IS-957/957DCDA.)

Features

- Sizes 2½", 3", and 4" available with quarter-turn ball valve shutoffs
- Replaceable check disc rubber
- · Extremely compact design
- 70% Lighter than traditional designs
- 304 (Schedule 40) stainless steel housing and sleeve
- · Groove fittings allow integral pipeline adjustment
- Patented torsion spring checks provide lowest pressure loss
- · Unmatched ease of serviceability
- Bottom mounted cast stainless steel relief valve
- · Available with grooved butterfly valve shutoffs
- · Sensor on relief valve for flood detection
- Flood alerts feature activated with add-on sensor connection kit, compatible with BMS and cellular network communication

957-NRS-FS 4"

957-OSY with Flood Sensor

NOTICE

Use of the flood sensor does not replace the need to comply with all required instructions, codes, and regulations related to installation, operation, and maintenance of this product, including the need to provide proper drainage in the event of a discharge.

Watts is not responsible for the failure of alerts due to connectivity issues, power outages, or improper installation.

NOTICE

The information contained herein is not intended to replace the full product installation and safety information available or the experience of a trained product installer. You are required to thoroughly read all installation instructions and product safety information before beginning the installation of this product.

Inquire with governing authorities for local installation requirements.

^{*}The wetted surface of this product contacted by consumable water contains less than 0.25% of lead by weight.

Specification

The Reduced Pressure Zone assembly shall consist of two independent torsion spring check modules, a differential pressure relief valve located between and below the two modules, two drip tight shutoff valves, and required torsion spring check modules and relief valve shall be contained with a sleeve accessible single housing constructed from 304 (Schedule 40) stainless steel pipe with groove end connections. Torsion spring checks shall have replaceable elastomer discs and in operation produce drip tight closure against the reverse flow of liquid caused by backpressure or backsiphonage. The assembly shall be a Watts Series 957, and shall include a flood sensor on the relief valve for flood detection.

(0.5°C - 60°C)

Maximum Working Pressure 175 psi (12.1 bar)

Approvals

- Approved by the Foundation for Cross-Connection Control and Hydraulic Research at The University of Southern California (FCCCHR-USC), excluding 10" N-pattern installation as well as 6" and 10" Z-pattern installations
- AWWA C511-97

For additional approval information, contact the factory or visit watts.com.

NOTICE

When installing a drain line on Series 957 backflow preventers, use 957AG air gaps. Attach the air gap brackets directly onto the flood sensor. For additional information, refer to ES-AG/EL/TC at watts.com

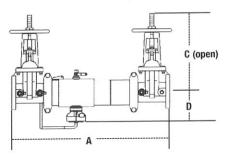

[&]quot;Options for the gate valve:

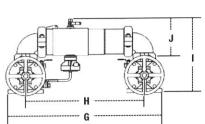

Consult factory for dimensions.

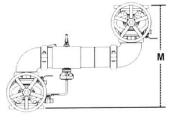

⁻ Available with grooved NRS gate valves; consult factory.

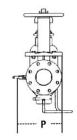

⁻ Post indicator plate and operating nut available; consult factory.

Capacity

Flow curves as tested by Underwriters Laboratories.

Flow capacity chart identifies valve performance based upon rated water velocity up to 25 fps.

- · Service Flow is typically determined by a rated velocity of 7.5 fps based upon schedule 40 pipe.
- · Rated Flow identifies maximum continuous duty performance determined by AWWA.
- UL Flow Rate is 150% of Rated Flow and is not recommended for continuous duty.
- AWWA Manual M22 (Appendix C) recommends that the maximum water velocity in services be not more than 10 fps.

Flow characteristics collected using butterfly shutoff valves.

Pressure Reducing Control Valve

Features

- Throttles to reduce high upstream pressure to constant lower downstream pressure
- Reducing setpoint is adjustable
- Utilizes advanced ArmorTek® coating technology to resist corrosion of internals

Standard Components

- 1 Main Valve (Single Chamber)
- 2-Pressure Reducing Control
- 3-Fixed Orifice
- X-Isolation Cocks with pre-installed Gage Ports

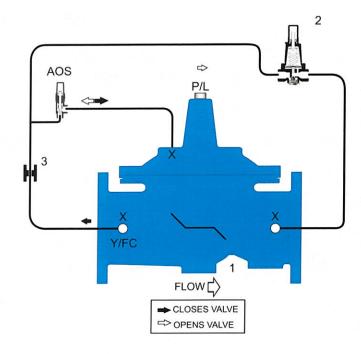

Options and Accessories

- O FC Flo-Clean Strainer (Standard 11/4" 4")
- O Y Y-Strainer (Replaces Flo-Clean)
- O ACS Adjustable Closing Speed (Replaces Fixed Orifice)
- O AOS Adjustable Opening Speed (Standard 11/4" 4")
- O P Position Indicator
 O L Limit Switch
- O G Inlet/ Outlet Pressure Gauge (0-300psi)

Operation

The ACV Pressure Reducing Control Valve is designed to automatically reduce a fluctuating higher upstream pressure to a constant lower downstream pressure regardless of varying flow rates. It is controlled by a normally open, pressure reducing pilot designed to: 1) Open (allowing fluid out of the main valve cover chamber) when downstream pressure is below the adjustable setpoint, and 2) Close (allowing fluid to fill the main valve cover chamber) when downstream pressure is above the adjustable setpoint. A decrease in downstream pressure causes the valve to modulate toward an open position, raising downstream pressure. An increase in downstream pressure causes the valve to modulate toward a closed position, lowering downstream pressure.
