

ADDENDUM 1

Bid # 164297-Natural Resources

ANSWERS TO QUESTIONS ARE IN RED

- 1. Would the Purchaser consider the use of a diesel-powered engine for the pump, or is a gasoline-powered engine a strict requirement of the specification?**

Utilizing a diesel-powered pump engine would allow the apparatus to operate from a single fuel source tied directly into the chassis fuel system. This approach would eliminate the need for a secondary auxiliary fuel tank, reduce maintenance complexity, and simplify fuel logistics for the department.

The diesel-powered fuel source is acceptable.

- 2. On page 6 of the bid packet, a front-mounted winch is specified, along with a rear receiver. I would like to confirm the expectations for the front winch installation. Specifically, is the winch intended to be fully integrated into the front bumper, or mounted externally in front of the grille?**

The front mounted winch needs to be integrated into the bumper.
