

Work Write Up

Office of Environmental Health and Engineering – Energy Efficient Project

1. Scope of Work

This project will consist of installation of R-38 attic insulation, via mineral wool batts and poly-support netting. In addition to the insulation, the gable end walls will receive sheathing, vapor barrier (there is none currently) and new siding/paint. Lastly, the attic will need elevated access or a catwalk after the insulation is installed.

The plans and bidding page list the insulation as the base bid, the catwalk as alternate #1 and the gable end wall sheathing and siding as alternate #2.

2. Project Delivery

Construction Administration will be performed for the duration of the contract on behalf of the Office of Environmental Health and Engineering.
