RFB# 164538- Lights & Cooling Fans

Questions- Please answer the below each question in RED.

- 1. Just a question, in years past the Cherokee Nation rented the majority of the equipment for a week and a few pieces for around 10 days. On the received bid packet, does the Cherokee Nation want all this equipment for a two-week period? I know as the dates flow it is 15 days, but with the 7th being a day that Sunbelt Rentals isn't working I am not counting that on this bid. I just want to make sure our prices reflect the time of possession that the Cherokee Nation would like with the equipment.**

If we can get them on August 31st and only pay for 1 week that would be great.

2. I have reviewed the specifics on the lights defined as "towable lights".

Would balloon lighting as noted in the link to follow be acceptable? [Best LED Balloon Lights Made in America | Galaxy Air Lights](#) Amy Tanner in Emergency Management has seen these in person.

Note these can be mounted on tripods, or with a pole and hitch adapter for mounting on vehicles or equipment. Note the battery and generator run systems as well.

Purchasing these would remove the costs of rentals and provide a non-glare lighting environment suitable for any and all community events.

We need to be able to tow the lights with ATVs to get them into the fields. I'm not sure if the balloon lights are able to do that. We do not have the storage to house these year-round as of now.
